Nibble — Reinstall Guide

Remove the old version completely, then download and install the latest one. Follow the red marks on each screenshot.

Part 1 — Remove the old Nibble

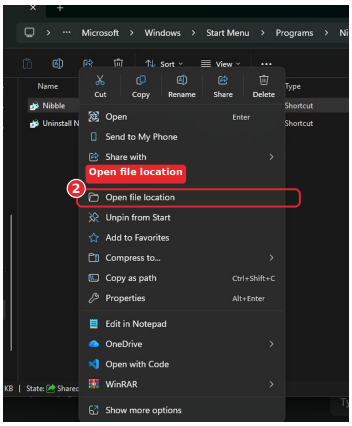

1 Find Nibble in Start

Open the Start menu, **right-click** the Nibble app, and choose **Open file location**.

2 Open its real location

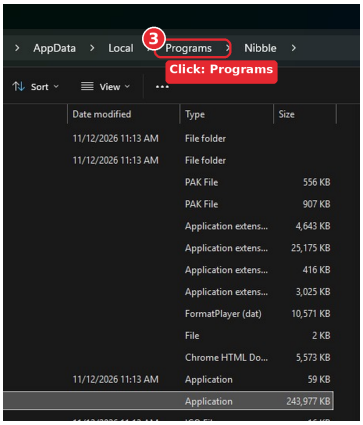

A shortcuts folder opens. **Right-click** the **Nibble** shortcut and choose **Open file location** again — this jumps to the actual program files.

3 Go up to the Programs folder

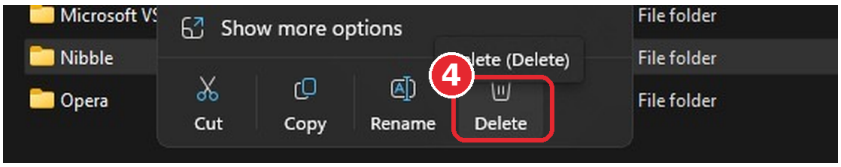

You are now inside the Nibble program folder. In the address bar at the top, **click “Programs”** to go up one level.

➜ *This is …\AppData\Local\Programs — the Nibble folder sits here.*

4 Delete the Nibble folder

Right-click the **Nibble** folder and choose **Delete**. This removes the old version completely. If Windows says the app is running, quit Nibble from the tray first (right-click the tray icon, choose Quit), then delete.

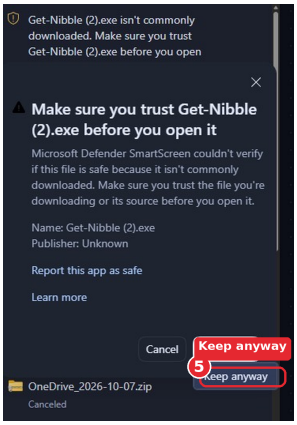

Part 2 — Install the latest Nibble

5 Download from the Nibble website

Go to **nibble-pearl.vercel.app** and click the **Download** button to get the latest **Get-Nibble.exe**.

➜ *If Windows SmartScreen warns you: click the small drop-down arrow next to **Delete**, then **Keep anyway**.*

6 If the browser blocks it (alternative)

In the browser's **Downloads** list, click the **three-dots menu** next to the file and choose **Keep**. The file is safe — it's just unsigned, so Windows doesn't recognise it yet.

➜ *Then run Get-Nibble.exe and reopen Nibble. Done!*
